Subject Re: comments on route for pipeline

Larry,
Thank you for your comment. I will make sure it is incorporated into our process.

Best,
Kara

I am in favor of the preliminary endorsement of the route out of Pueblo Reservoir for the SDS pipeline. The route would be better for the people of Pueblo West Colorado Springs and Fountain etc. It is my opinion (My Editorial) that the main reason Pueblo is trying to block Colorado Springs from putting the system out of the Pueblo is pure jealousy. We might have believed all the stuff we read in the Paper, if it wasn't for the fact that Pueblo after using growth and tail water and bacteria as a reason to come up with a special rule that would block Colorado Springs from getting water, has announced they are trying to buy the best ditch on the river below Pueblo and have annexed an enormous addition in to the city. It is my opinion that Colorado Springs is doing a lot more to improve water quality that is Pueblo. We live on the Arkansas River in Pueblo county and get their run off. The runoff and sewage from Pueblo is a lot worse than Colorado Springs. Their sewage has heavy metals and the Pueblo area produces enormous amounts of salt. A CSU extension agent a number of years ago tried to sound the alarm on how much salt was being produced in Pueblo. At that time he had collected run off going in the the drain at sites along the interstate and CSU Pueblo. These tests showed up as being two times as salty as the Pacific ocean. If there is to be growth and there will be, I feel safer for it coming out of Colorado Springs that Pueblo. When it is all done and said the real source of the bacteria will be from animals not sewage spills. I hope all the fear brought on by the constant drum beat about how terrible Colorado Springs Spills are doesn't eventually bring rules to farmers instead that they can't possibly afford to deal with.
