Hi Marvin,
Yes and yes. There is also additional detailed information in the technical reports, which we released in January. All are available on the website at www.sdseis.com. The Water Resources Technical Report will probably have some of the information that interests you as will the Fry-Ark section of the hydrologic model.

Best,
Kara

I am not sure, are these question addressed in the EIS? I know it is a huge document. Is Kansas included in the review process?

Hi Marvin,
Are these comments you would like to submit to the SDS Draft EIS process, or are they question you wish to have answered?

Best,
Kara

If we start pumping water out of the Arkansas, how with that affect the people downstream. Do we have some obligation to the amount of water that has to go to Kansas? How can it be projected what would happen during years of drought?
